CASE STUDY

Higher Ed Success Story

Diversified CTV strategy helps higher ed institution boost enrollment and ROAS

adtaxi

Prior to partnering with Adtaxi, the higher education institution was struggling to drive enrollment and decrease CPE in target markets. Due to the institution committing itself solely to one platform, CTV, their strategy proved ineffective to reach enrollment goals, and the Cost Per Enrollee (CPE) remained high.

Adtaxi was challenged to diversify the media mix to complement the education institution's CTV strategy to increase enrollment and ROAS and decrease CPE with a target of $1,600 per enrollee.

Adding display retargeting and prospecting to CTV drove organic search and direct-to-site traffic. Adtaxi's approach helped the client reach new users who had not visited the site previously, which drove brand lift. Tapping into a more diverse strategy boosted enrollment in target markets, increased ROAS, and reduced the CPE.

CHALLENGES

Falling short of enrollment goals

High cost per enrollee

Leveraging a single platform of CTV, limiting reach and effectiveness

SOLUTIONS

Performed a thorough audit to evaluate and provide insights on existing CTV strategy

Diversified media mix to include display retargeting and prospecting to compliment CTV strategy

RESULTS

30%
increase in organic search traffic

+2,000%
increased ROAS

17.4%
increase in direct traffic

Driving Leads

Two months after launching the CTV campaign on this 6-month contract that began in March, Adtaxi drove an increasing number of apps, form fill requests for information (ie, ELIM), and enrollees.

Each month Adtaxi drove incremental leads. The only exception to this was June when Adtaxi's media spend was at its lowest.

A Layered Strategy

Throughout the year, Adtaxi layered optimization strategies to improve key markets, which resulted in increased conversion rates against core metrics.

Adtaxi also improved the cost-per-impression by adding display prospecting and retargeting strategies to add scale and capitalize on an engaged audience from the CTV campaign.

These efforts allowed Adtaxi to significantly increase ROAS by north of 2,000% and decrease the CPE below $1,000.

Exceeding Goals

In April, two months after launching the CTV campaign, Adtaxi identified the CPE was above goal.

We recognized that the CTV retargeting audience, specifically, was helping drive down the overall CPE. Adtaxi recommended that we expand our retargeting reach by adding display retargeting to help the campaign reach the KPI more efficiently. This tactic was then applied to all markets and continues to maintain its role in driving efficiency through the conversion process.

Increased Reach

In July, Adtaxi proposed adding display prospecting to allow for greater reach against the target audience at a lower cost. We believed we could continue to supplement the CTV efforts while driving incremental apps and leads. This was tested in three new markets.

Key Insights

The inclusion of display retargeting and prospecting to CTV advertising was critical to the success of the campaign, proving strategically stronger to drive enrollment in key markets for a higher ROAS and lower CPE, also providing the higher education institution with insight on why it's effective to diversify from a one platform CTV strategy
