Credibility - and whether a person has it or not - determines who you trust for guidance and information you use to make decisions in your everyday life. The four components of credibility for any human being are (1) being known, (2) being likable, (3) being helpful, and (4) being trustworthy. Credibility is gained (or lost) by what one says, how they say it, what they do and, finally, what others say about them. Having credibility also requires having others' best interests at heart.
