ELECTRICAL CONTRACTORS

in the New York TV market

Know the Market

Top zip codes for consumer spending on heat, a/c, and electrical work

[Source: 2025 EASI Demographics]

Electrical Contractors

Includes category intelligence for contractors who provide wiring, rewiring and repair for home and/or business. This includes structured cabling installers.

Industry Background

New York TV market includes all or portions of these counties: Bergen, Bergen, NJ, Bronx, Dutchess, Essex, Fairfield, Fairfield, CT, Hudson, Hunterdon, Kings, Litchfield, Mercer, Middlesex, Monmouth, Monmouth, NJ, Monroe, Morris, Nassau, New York, New York County, New York, NY, Ocean, Orange, Passaic, Pike, Putnam, Queens, Richmond, Rockland, Somerset, Suffolk, Sullivan, Sussex, Ulster, Union, Warren, Wayne, Westchester

Primary NAICS Code: *238210*
Electrical Contractors

Primary SIC Code: *1731*
Electrical Work (electrical work except burglar and fire alarm installation)

Industry Intel

Historically electricians or electrical contractors have been responsible for bringing electricity safely from a utility meter box into buildings and then installing wiring throughout the building. Contractors have recently begun to branch into related fields such as communications and data systems and safety systems which also include alarms. The work can consist of new construction as well as upgrades and renovations. The typical contractor may also perform project work for highway lighting needs. Contractors may win projects through a bid/build process.

To specify, electrical contractors are operators that manage electrical projects and may contract additional electricians to do certain tasks. Electricians do skilled work such as installing, repairing and maintaining electrical systems.

Some contractors may specialize in specific markets such as hospitals or medical office buildings.

The market is also changing as electricians are not only working on high-tech communications equipment and home theater installation, but they also expect to be working with alternate sources of energy such as solar in the future. Electricians are usually licensed and have completed some technical/trade education after high school however the changing demands of the profession may require ongoing technical education.

There are about 262,000 businesses operating in the United States electricians industry in 2026, with the number of businesses growing at 3.2% CAGR from 2021 to 2026. This shows a highly fragmented market with many small local firms and a limited number of large national players. Some of the largest businesses in this industry maintain multiple divisions that specialize in U.S. and overseas markets to maintain high revenue growth.

Looking ahead over the next several years, the United States electrical contractors industry is expected to continue growing from its 2026 revenue base of $347.5 billion, supported by ongoing nonresidential and utility investment, the need to upgrade existing building stock, and long term trends in electrification and digital connectivity. Items commonly offered by Electrical Contractors

- All work guaranteed
- Fast service
- Fully stocked trucks
- Licensed/bonded/insured
- Data and voice cabling specialists
- Reasonable rates
- Emergency service
- Smart home installation and service
- Insurance company approved
- Mobile app
- Energy management

Related Industries

HOME AUTOMATION

Home automation enables remote and automated control of household systems by connecting smart devices, sensors, and software through a central hub or mobile app. It includes products like thermostats, lighting, cameras, and locks that can be managed via schedules, voice assistants, or smartphone control, with connectivity across wireless protocols enabling automated responses based on sensor input.

Home automation installation is typically performed by licensed specialists who handle the design, installation, and integration of connected systems such as lighting, HVAC controls, security cameras, and smart locks. These systems operate through a central hub or app and require proper network connectivity, device configuration, and sometimes prewiring to ensure functionality across the home. Installation complexity varies depending on system size, with costs commonly ranging from $180 to $1,700 and averaging around $900.

The U.S. smart homes market totaled $50.3 billion in 2025 and is expected to reach $81.6 billion by 2031.The U.S. smart home installation service market totaled $10.2 billion in 2025 and expected reach $37.96 billion by 2031. Adoption is driven by strong consumer preference for convenience and security, with security systems holding a 29.3% share and Wi-Fi devices dominating at 60.35% of connectivity. DIY installations account for 67.35% of the market, though professionally installed systems are growing faster at a 10.1% CAGR.

A 2025 study found that 55% of homeowners planned to purchase at least one smart device in the next 12 months. However, adoption is constrained by cost, with 53% of homeowners citing affordability as the primary barrier, alongside concerns about ecosystem complexity (20%) and device compatibility (18%). Security remains the leading use case, with 37% of consumers most interested in protection features, including 20% planning to buy outdoor cameras and 20% planning to buy smart doorbells.

Perceived value of smart home devices varies significantly by age and product type. Consumers aged 25–44 show the highest overall recognition of value across smart home categories. Among older adults, adoption intent declines, but smart thermostats retain relatively stronger appeal, with 35% of consumers aged 55+ rating them as valuable compared with an overall average of 40%. In contrast, smart locks show a sharper drop-off, with only 23% of consumers aged 55+ seeing value versus an average of 36% across all age groups.

Note that purchase behavior is heavily research-driven, with 51% of buyers consulting expert or user reviews. Ease of installation is a key driver of long-term satisfaction in the smart home market, though challenges remain common. While self-installation has improved over time, 52% of DIY installers still report at least one issue, even though this is down from higher levels two years earlier. Certain product types are more difficult than others, with smart water-related devices identified as the most challenging to install, creating opportunities for plumbers and irrigation professionals to expand into smart home services. Professional installation plays a significant and growing role in adoption.

Overall, 44% of smart home device owners have used professional installers for at least one device. Installation through the original product provider has steadily increased, while independent contractor installation declined for several years before rising to 26% in 2024. Professional installation is especially important in programs where devices such as smart thermostats are distributed by utilities, helping ensure proper setup and enabling participation in demand-response energy programs.

Support needs remain high even after installation. Among users who found setup “very difficult,” 30% contacted online support agents, compared with only 9% among those who did not experience difficulty.

Consumers rely heavily on digital resources such as online videos and manufacturer guides, often interchangeably, and increasingly expect video-based setup support integrated via QR codes or apps. Despite growing interest in digital tools, preferences for AI-based support remain limited, with only 4% of consumers indicating they would choose an AI assistant as their preferred support option.

Target Customers

The following customer types work with these operators:

- New single-family housing
- Office buildings
- Stores, restaurants, other commercial buildings
- Educational buildings
- Other buildings
- Non-building construction work
- Homeowners

A major source of business for electrical contractors is general contractors who sub out part of a new construction project to various trades, including electricians. Electrical Contractor reports that sources of business include open competitive bid, pre-qualified bid, established customers, and new customers.
[Source: ECmagdigital.com, n.d. Web. 21 May 2026.]

Target Customers by Mile Radius

Most customers are drawn from a 15 mile radius. Service areas can vary greatly depending on the business's location (most seem to service areas between 10 miles and 60 miles). [Sources: GrafElectric.com, n.d. Web. May 2024.]

Top Factors People Consider When Choosing This Type Of Account

- Positive word-of-mouth referrals for residential work
- Part of network (including building owners, construction companies and/or architects)
- Insurance
- Availability
- Price
- Safety and compliance
- Qualifications and licensing
- Customer service

For government or commercial work, project bidding is an important source of new work. [Sources: ECmagdigital.com;p tedmag.com.]
