CASE STUDY

# Omnichannel Outperforms the Market

Programmatic and CTV Reduce Costs and Drive Multi-Market Performance

Home Services | Programmatic · CTV · Search · Social

## RESULTS

**125%**
INCREASE IN BRANDED CLICKS YoY

**133%**
INCREASE IN BRANDED CONVERSIONS

**+24%**
REVENUE PACING OVER 2025 GOAL

| Challenges | Solutions |
|---|---|
| Low branded search; high CPL from window/door keywords | Leverage programmatic to drive branded search volume |
| GDN spend was not converting to leads | Implement conversion tracking to measure the impact of display and CTV |
| Seasonal, competitive, and economic challenges | Ongoing tracking of website traffic, sales activity & ROAS |

## KEY INSIGHTS

Paid search remained a core lead driver, with branded terms capturing high-intent demand efficiently. Despite steady broadcast TV, programmatic delivered standout gains. Mid- and upper-funnel tactics—programmatic display and CTV—expanded awareness, shifted search behavior among in-market homeowners, and delivered strong assist value. Creative discipline mattered: systematic A/B tests of offers, financing, and benefits sharpened messaging and match quality. As market forces evolve, ongoing optimization sustains momentum. An integrated, omnichannel strategy ultimately drove more qualified prospects, closed leads, and revenue.

THE FULL STORY

# Building brand demand beyond search

A multi-location home services brand in the Southeast moved to Adtaxi in late 2022 to diversify beyond a search-heavy strategy. By early 2024, rising competition pushed costs up in paid search while lead flow went down, especially on window and door terms. With limited scale from print and local TV, the priority was to restore lead volume at a lower cost and reduce reliance on search alone.

Adtaxi introduced an omnichannel, programmatic-led approach to expand reach, grow branded demand, and drive more qualified traffic. Programmatic display launched in January 2024 in Orlando to reach homeowners researching window and door upgrades, then expanded to Fort Myers, Tampa, Sarasota, and Boca Raton by September 2024 based on results. Branded search activity went up, and direct and organic traffic increased year over year.

In January 2025, the plan added streaming TV and paid social across all markets. Despite ongoing cost pressures in non-branded search due to competition and economic factors, brand demand creation became a key growth driver. The client remains on track to finish the year well above revenue goals.

Execution used Google Ads and The Trade Desk for programmatic display and connected TV (CTV), with CallRail and Google Analytics tracking form fills, chats, calls, traffic, and site behavior. First-party sales data powered return on ad spend (ROAS) measurement and clear attribution, tying programmatic exposure to increases in branded search and downstream conversions, with ongoing governance guiding optimizations.

Following the introduction of The Trade Desk (TTD) in early 2024, branded search costs went down while clicks and conversions increased. Upper-funnel engagement also rose as total users, direct traffic, and organic traffic went up, leading to higher conversions from both organic and direct. After adding CTV and paid social in early 2025, users and conversions increased further, and revenues are pacing well above target.

The client, a multi-location home services business in the Southeast, showed strong growth potential. To align with evolving opportunities, the account shifted to Adtaxi in late 2022 with an initial focus on paid search and Google Display Network (GDN).

By early 2024, about 96% of digital spend was in paid search. As competition intensified, the cost per click (CPC) rose while lead flow declined—window and door keywords increased 25–30% in CPC. Outside of search, the client used limited print and local TV, leaving few options to scale efficiently. The priority was clear: restore lead volume at a lower cost per lead.

An omnichannel strategy centered on programmatic was introduced to expand reach, boost branded search demand, and drive more qualified traffic to the site—improving efficiency while reducing reliance on paid search alone.

To boost lead flow, the client launched programmatic display to reach homeowners researching window and door upgrades. The goal was to build consideration and guide prospects through the decision process, increasing branded search within paid search.

Given caution around spend during a dip in leads, the rollout began in one market (Orlando) in January 2024, with expansion contingent on results. Over nine months, programmatic display would be extended to Fort Myers, Tampa, Sarasota, and Boca Raton by September 2024. The client saw strong gains in branded search volume and higher website traffic from direct and organic sources year over year.

In January 2025, the plan expanded to include streaming TV and paid social across all markets. These additions drove further increases in branded search and conversions. Competitive pressure and economic factors (including tariff concerns) continued to raise costs in 2025—especially on non-branded search—making brand demand creation a critical part of the mix. As of September 2025, the client is on track to surpass annual revenue goals by 25%.

Adtaxi leveraged Google Ads and TTD for programmatic display and CTV to drive demand

and lift branded search across Google and Bing. Conversions were tracked across key actions—form submissions, online chats, and phone calls—using CallRail, while Google Analytics monitored site traffic and behavior trends. First-party sales data powered ongoing ROAS measurement, ensuring revenue-focused optimization. This setup also enabled clear attribution, tying display and CTV exposure to increases in branded search and downstream conversions, with continuous governance across traffic, sales activity, and ROAS to guide decisions.

Following the introduction of TTD in January 2024, the client saw a 21% decrease in branded search CPC versus 2023, alongside a 125% increase in branded clicks and a 133% lift in branded conversions (rising from 256 to 598). The added programmatic support also coincided with stronger upper-funnel signals: between Q4 2023 and Q1 2024, website users rose 45% overall, with a 24% increase from organic search and a 41% increase from direct traffic; website conversions from organic grew 54% and from direct grew 30% in the same period. Momentum continued into 2025 as clicks, impressions, and conversions outpaced 2024 across markets. Although the client was running broadcast TV steadily in every market, the boost we saw from programmatic was more significant. With CTV and additional tactics (including Meta paid social) launching in January 2025, total users increased 65% from Q4 2024 to Q1 2025, organic users rose another 6%, direct traffic climbed 60%, and website conversions increased 42% from organic and 17% from direct. Financially, many markets have already met or exceeded full-year revenue targets year-to-date, and total revenues are projected to finish 2025 at 24% above goal.
