Challenges	Solutions
Review performance of current digital marketing campaigns across all platforms	Leverage programmatic display with a focus on mobile placements
Drive interest of newly qualified nursing graduates to an upcoming hiring event	Improve targeting for specific audiences within targeted geographies

KEY INSIGHTS

Visibility into post-impression visits was critical to the success of the campaign. While the CTR was on the higher end of the national average, the driver of performance came from view-throughs. Adtaxi and the health system were able to leverage this data to understand who was engaging with their message and to refine targeting accordingly to further focus on newly qualified nursing graduates.

THE FULL STORY

Recruiting in a Competitive Market

Job openings continue to be at record highs, but many companies still struggle to fill open positions. Changes brought on by the pandemic and shifting priorities have created an extremely competitive environment. These changes in the job market have impacted nearly every industry and recruitment has become increasingly challenging.

In an effort to fill open nursing positions, this health system planned a hiring event to recruit nursing graduates. They needed to drive engaged traffic to a specialty landing page with the goal of reaching and influencing qualified candidates in specific markets. They asked Adtaxi to review their current campaigns and make recommendations to ensure the success of their event.

With insights gained during a comprehensive audit of current digital marketing campaigns, we were able to develop a new programmatic display strategy that focused on measuring engagement and refining targeting to reach the intended audience and boost the health system's efforts on a moderate budget.

Our mobile display campaign click-through rate exceeded the national average and participation in the hiring event was so high they needed to extend the event hours to accommodate the candidates.

Driving Interest

In a crowded market and within a moderate budget, this health system was struggling to drive the interest of newly qualified nursing graduates from schools in the area to their upcoming hiring event.

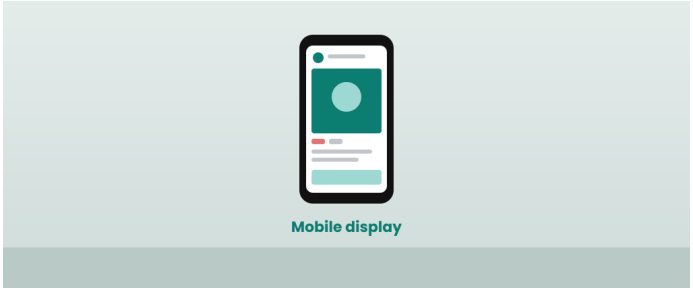

Evaluating Performance

Adtaxi was brought in by the health system to evaluate the performance of the digital marketing campaign promoting their upcoming hiring event, as it was not driving the results they expected.

We conducted a thorough audit of the client's promotional efforts and identified that performance from organic search engine results pages (SERP) and social media channels, like Facebook and Twitter, were not delivering the expected or desired results.

A New Strategy

Due to the challenges with their existing efforts and understanding the health system's goals, Adtaxi recommended programmatic display, with a focus on mobile placements, to reach and influence potential recent nursing graduates across marketing platforms.

Adtaxi's granular targeting within the geography allowed them to increase frequency with those most likely to engage, which drove awareness and garnered a higher volume of clicks and CTR for their budget.

Awareness & Engagement

The programmatic display strategy we implemented delivered a click-through rate that exceeded the national average and an eCTR that was over 6 times greater than average. This high eCTR indicated strong receptiveness to the messaging, which significantly increased the performance of the campaign.

Our advanced targeting methods allowed us to reach an engaged audience of qualified candidates in specific geographies. This hyper-targeted, short-burst programmatic mobile display campaign drove significant awareness about the event resulting in participation that was so high the event was extended by three hours to accommodate demand.
