GROWING BUSINESSES ONLINE: TECHNOLOGY SERVICES PROVIDER

Repairing campaign setup and tracking to deliver steady flow of business for computer service & support representatives.

Technology Services | Google Search · Display

adtaxi

RESULTS:

37%
Increase in customer sign ups

11%
Increase daily lead volume

45%
Reduction in cost per lead

68%
Reduction in cost per click

CAMPAIGN GOAL:

Assess all Google channels to identify lowest cost conversions.

Consistent volume of 300-500 leads per day to maintain steady flow of work for sales representatives.

Tasked with achieving a cost per lead under $4.00.

CHALLENGE:

With 95% of all leads not ready for purchase, the focus was to increase the lead to customer conversion rate. In addition, data wasn't tied to their CRM to fully understand the path to conversion, thus tracking was only available at the lead level.

THE FULL STORY

Rethinking the strategy

Previous Strategy Insights: 75% of campaign dollars were in Display Network which helped achieve a cost per lead less than $4.00, but seemed counter-intuitive to the power of general Google Search ads, as display advertising generally drives a lower lead quality score, which then results in higher conversion costs.

Solution: By connecting Google Ads with the company's CRM, details became available at the customer level. This helped understand conversions driven at the campaign, ad group, keyword/placement, and ad copy level which could then be used to restructure based on performance. The granular level of data was critical for assessing budget allocations and optimization strategies.

KEY INSIGHTS

The data collecting yielded insights that went against conventional assumptions that search advertising has the highest Lead to Qualified Customer rate.

From campaign analysis, it was determined that display was the highest converter for this client. Based on this information, daily budget was shifted to the highest converting campaigns and ad groups

TAKEAWAYS:

Let the data be your guide.

Ensure your campaigns measure end-to-end performance.

Don't assume anything, question conventional wisdom.
